Dashboard Summary of Findings

2014

Summary

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. The NCS captures residents’ opinions within the three pillars of a community (Community Characteristics, Governance and Participation) across eight central facets of community (Safety, Mobility, Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement). This report summarizes Jupiter’s performance in the eight facets of community livability with the “General” rating as a summary of results from the overarching questions not shown within any of the eight facets. The “Overall” represents the community pillar in its entirety (the eight facets and general).

By summarizing resident ratings across the eight facets and three pillars of a livable community, a picture of Jupiter’s community livability emerges. Below, the color of each community facet summarizes how residents rated each of the pillars that support it – Community Characteristics, Governance and Participation. When most ratings were higher than the national benchmark, the color is the darkest shade; when most ratings were lower than the national benchmark, the color is the lightest shade. A mix of ratings (higher and lower than the national benchmark) results in a color between the extremes.

Broadly, Jupiter’s ratings tended to be similar when compared to other communities across the nation. Within the pillar of Community Characteristics, General and Natural Environment ratings tended to be higher in Jupiter than in comparison communities. Governance ratings were higher within the facet of Economy.
